Lung Cancer Risk Prediction System | Clinical Decision Support Tool

Clinical Assessment Form

Lifestyle Factors

Smoking Status
Current

Breathing Difficulty
Yes

Throat Irritation
Yes

Pollution Exposure
Yes

Genetic Factors

Family Cancer History
No

Family Smoking History
No

Clinical Metrics

Age (years)
68

SpO_2 (%)
91

Health Status Assessment

Vital Signs

Energy Level
4

⚠ Low energy level

Immune Status

Immune Health
3

⚠ Weakened immunity

⚠ **Clinical Note:** Below normal SpO_2 (91%).
Monitor oxygen saturation closely.

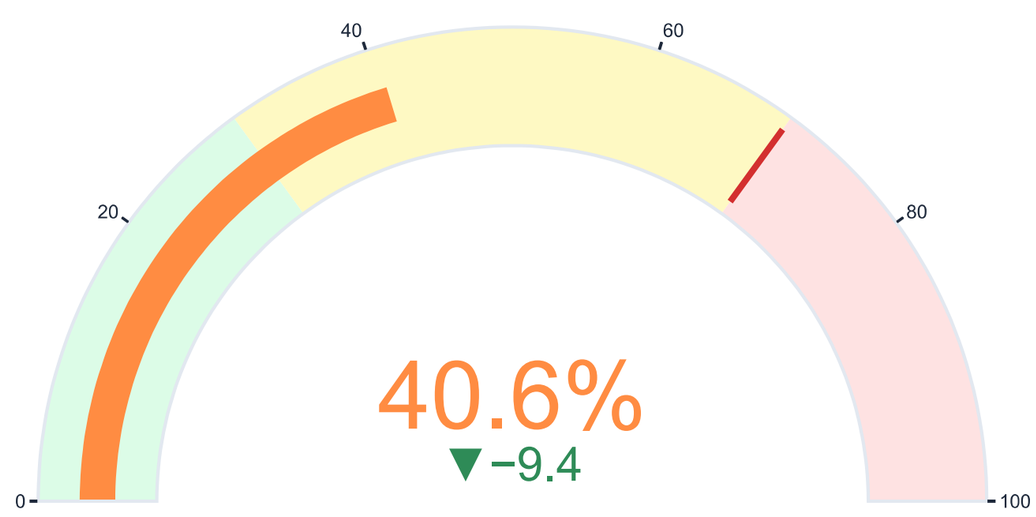
Analyze Risk Profile

Moderate Risk

Moderate

Predicted Probability: **40.6%**

Clinical Recommendation:
Low-dose CT scan (LDCT) recommended within 3 months. Pulmonology consultation advised. Consider smoking cessation program if applicable. Monitor respiratory symptoms closely.



Detailed Factor Analysis

68	Current	91%	✓ Absent

Age (years)	Smoking Status	SpO_2 Level	Family History
● High Risk	● Critical	● Low	● No known risk

💪 Health Status Analysis

4/10
Energy Level
● Compromised
Severe fatigue detected

3/10
Immune Health
● Immunocompromised
Weakened immune response
